

The -F option Ripple Stripper® output filter adds additional ripple-reduction circuitry internally to DC-to-HV DC high voltage power supply modules prior to encapsulation at the factory.

For greater performance, the optional shield should be used when available. Output regulation is not changed; on certain models an output voltage monitor is also added to the module. Please see the corresponding data sheets for additional specifications: A, 10A-40A, RS, and HVA.

OUTPUT VOLTAGE MONITOR

The -F option features a 100:1 voltage monitor on pins 12 and 13 referenced to Signal Ground pin 5. The monitor output impedance is calibrated for use with a 10 MΩ input impedance meter. Units 2 kV or higher have a 100/1.1 MΩ divider; units below 2 kV use a 10 MΩ/102 K divider. Overall accuracy is ±2.5% with a temperature coefficient of ±200 ppm per °C.

For applications requiring a different scale factor, such as an ADC compatible design, an external resistor may be added in parallel with the output.

OUTPUT CURRENT MONITOR

Output monitor scale factors for -F option units are:
